

# Corn Ethanol – Process and Production Economics

**Presented to the  
2007 Fertilizer Outlook and Technology Conference**

**Arlington, VA  
November 8, 2006**

**John M. Urbanchuk  
Director, LECG LLC**

## Ethanol ( $\text{CH}_3\text{CH}_2\text{OH}$ )

- ❖ Ethyl alcohol made primarily by converting starch in agricultural products to sugar and then to alcohol.
- ❖ Used as an additive to enhance octane and add oxygen to motor gasoline.
- ❖ Most ethanol sold as a 10% blend (E-10)
- ❖ E-85 is slow out of the blocks due to infrastructure constraints

## U.S. Ethanol Production

## Feedstock and energy costs are the key to ethanol profitability

- ❖ Feedstocks typically account for almost two-thirds of operating costs.
- ❖ Co-product credits (distiller's grains and CO<sub>2</sub>) are crucial to controlling feedstock costs.
- ❖ Energy costs are a close second in importance.
  - Using co-generated power from waste-coal or landfill gas as a boiler fuel can cut production costs.

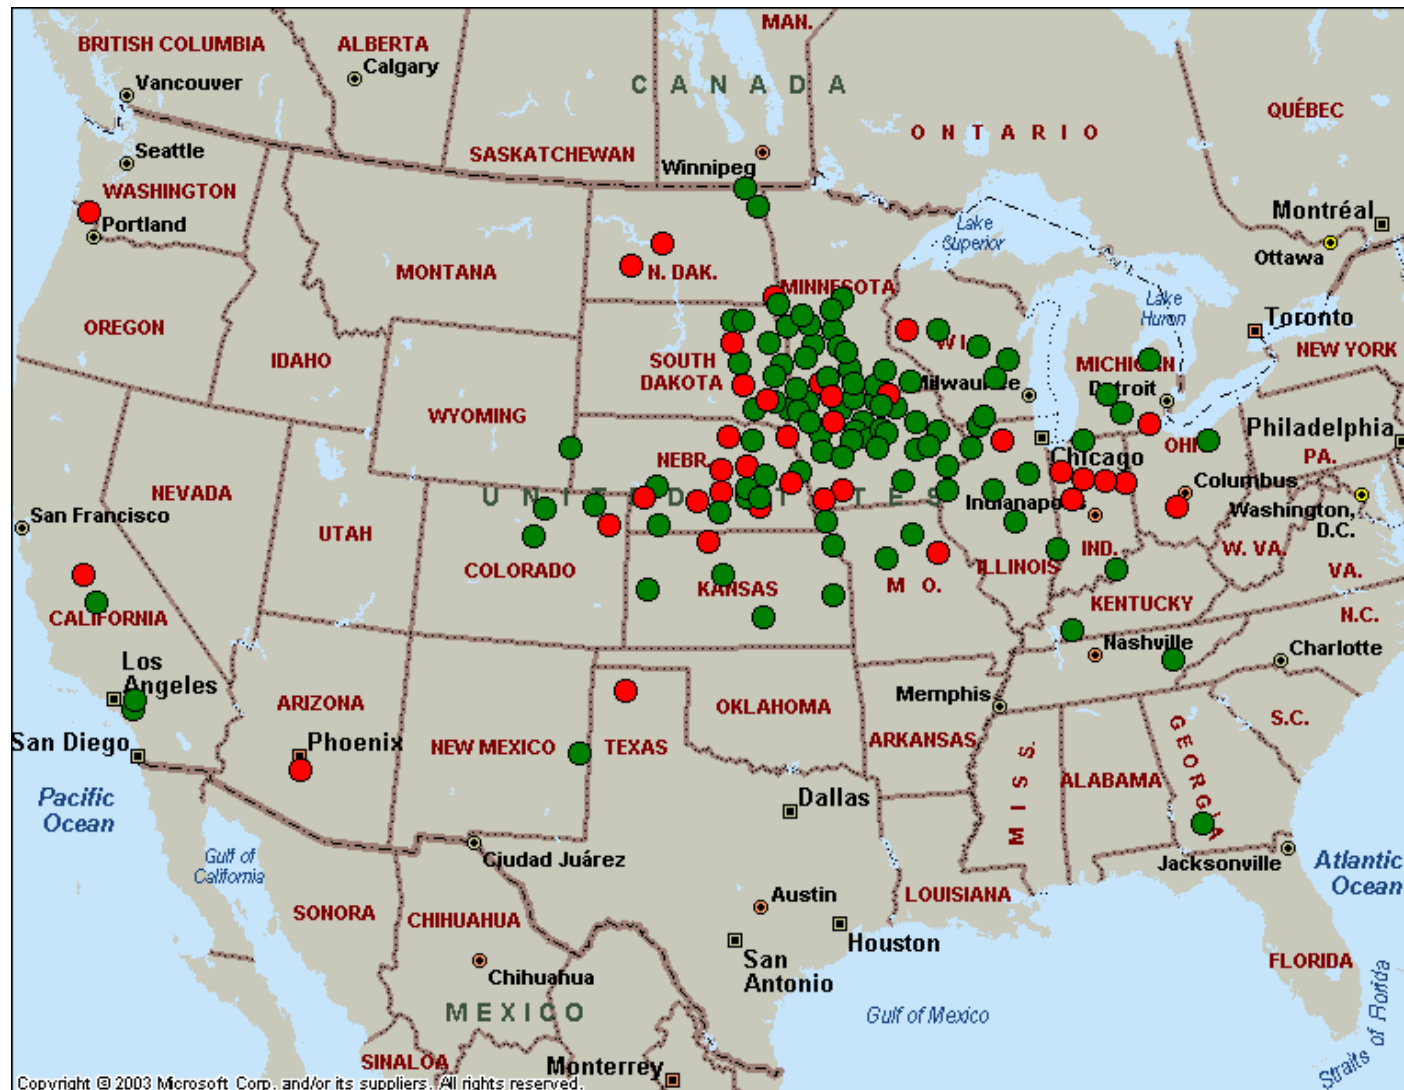

## Corn Used for Ethanol Production

Source: USDA/ERS

## Today's ethanol industry is Midwest based

## Feed stocks account for about 60% of production costs

Source: USDA/ERS Feed Grain database

## Co-product (DDG) prices closely follow corn prices

Source: USDA/ERS Feed Grain database

## Ethanol prices closely track gasoline prices

Source: OPIS; EIA

## Technology and Capital Cost

- ❖ Conventional grain fermentation ethanol production technology is well understood.
- ❖ Current technology for cellulosic ethanol is another matter.
  - Current technology for cellulosic ethanol is the acid hydrolysis process. Capital costs are almost 4X that of dry mill ethanol.
  - Enzyme technology holds promise for improved economics, but is not yet commercialized.

## Bioenergy Crop-based Processes

<b>Raw Material</b>	<b>Pre-treatment</b>	<b>Current Yield (gal/ton)</b>	<b>Potential Yield (gal/ton)</b>	<b>Production Cost (\$/gal)</b>	<b>Capital Cost (\$/gal)</b>
<b>Com'l Crops</b>	<b>Mechanical</b>	<b>106</b>	<b>106</b>	<b>\$1.12</b>	<b>\$1.10</b>
<b>Biomass</b>	<b>Gasification</b>			<b>Unknown</b>	<b>\$2.40</b>
<b>Biomass</b>	<b>Acid Hydrolysis</b>	<b>52</b>		<b>\$1.80</b>	<b>\$4.70</b>
<b>Biomass</b>	<b>Base Hydrolysis</b>		<b>120</b>	<b>\$0.75</b>	<b>\$2.40</b>

## What does it take to produce a gallon of ethanol?

Input	Quantity	Units
Corn	0.364	Bu
Enzymes	0.037	Lb
Yeast	0.005	Lb
Chemicals	1.121	Lb
Denaturant	0.030	Gal
Electricity	0.750	Kw
Natural Gas	0.014	Mcf
Steam	20.0	Lb
Water	4.700	Gal

## What does it cost to make a gallon of ethanol today?

<b>Corn, Cent Ill Cash (\$/bu)</b>	<b>\$3.26</b>
<b>DDG (\$/ton)</b>	<b>\$89.14</b>
<b>CO2 (\$/lb)</b>	<b>\$2.50</b>
	<b>(\$/Gal)</b>
<b>Feedstock Costs</b>	<b>\$1.185</b>
<b>Byproduct credits (DDGS)</b>	<b>\$0.276</b>
<b>Carbon Dioxide</b>	<b>\$0.007</b>
<b>Net Feedstock Costs</b>	<b>\$0.903</b>
<b>Cash Operating Expenses</b>	
<b>Electricity</b>	<b>\$0.048</b>
<b>Fuels</b>	<b>\$0.276</b>
<b>Enzymes, Yeast, Chemicals</b>	<b>\$0.056</b>
<b>Water &amp; sewer</b>	<b>\$0.007</b>
<b>Denaturant</b>	<b>\$0.044</b>
<b>Maintenance</b>	<b>\$0.053</b>
<b>Labor</b>	<b>\$0.055</b>
<b>Admin &amp; Other Costs</b>	<b>\$0.045</b>
<b>Subtotal</b>	<b>\$0.585</b>
<b>Total Costs</b>	<b>\$1.488</b>

**Even at today's rising corn prices, ethanol is profitable!**

	<b>(\$/Gallon)</b>
<b>Revenue from ethanol sales</b>	<b>\$2.07</b>
<b>Net Operating Cost</b>	<b>\$1.49</b>
<b>EBITDA</b>	<b>\$0.58</b>
<b>Depreciation</b>	<b>\$0.18</b>
<b>Interest cost (60% debt, 10 years @ 8%)</b>	<b>\$0.05</b>
<b>Net Income</b>	<b>\$0.36</b>
<b>ROI (\$1.75/gallon capital cost)</b>	<b>33.3%</b>

## Ethanol Profitability Matrix (EBITDA)

←————— Corn Price —————→

		<b>\$2.00</b>	<b>\$2.50</b>	<b>\$3.00</b>	<b>\$3.50</b>	<b>\$4.00</b>	<b>\$4.50</b>	<b>\$5.00</b>
Ethanol Price ↑ ↓	<b>\$1.50</b>	<b>\$0.47</b>	<b>\$0.29</b>	<b>\$0.11</b>	<b>(\$0.07)</b>	<b>(\$0.26)</b>	<b>(\$0.44)</b>	<b>(\$0.62)</b>
	<b>\$1.75</b>	<b>\$0.72</b>	<b>\$0.54</b>	<b>\$0.36</b>	<b>\$0.18</b>	<b>(\$0.01)</b>	<b>(\$0.19)</b>	<b>(\$0.37)</b>
	<b>\$2.00</b>	<b>\$0.97</b>	<b>\$0.79</b>	<b>\$0.61</b>	<b>\$0.43</b>	<b>\$0.24</b>	<b>\$0.06</b>	<b>(\$0.12)</b>
	<b>\$2.25</b>	<b>\$1.22</b>	<b>\$1.04</b>	<b>\$0.86</b>	<b>\$0.68</b>	<b>\$0.49</b>	<b>\$0.31</b>	<b>\$0.13</b>
	<b>\$2.50</b>	<b>\$1.47</b>	<b>\$1.29</b>	<b>\$1.11</b>	<b>\$0.93</b>	<b>\$0.74</b>	<b>\$0.56</b>	<b>\$0.38</b>
	<b>\$2.75</b>	<b>\$1.72</b>	<b>\$1.54</b>	<b>\$1.36</b>	<b>\$1.18</b>	<b>\$0.99</b>	<b>\$0.81</b>	<b>\$0.63</b>
	<b>\$3.00</b>	<b>\$1.97</b>	<b>\$1.79</b>	<b>\$1.61</b>	<b>\$1.43</b>	<b>\$1.24</b>	<b>\$1.06</b>	<b>\$0.88</b>

## How is the industry likely to grow?

## Projected Sources of Ethanol

	<b>ETOH Production (MGY)</b>	<b>Corn (MGY)</b>	<b>Other Feedstocks (MGY)</b>	<b>Cellulose (MGY)</b>
<b>2005</b>	<b>3,904</b>	<b>3,592</b>	<b>312</b>	<b>0</b>
<b>2006</b>	<b>4,905</b>	<b>4,659</b>	<b>245</b>	<b>0</b>
<b>2007</b>	<b>6,115</b>	<b>5,809</b>	<b>306</b>	<b>0</b>
<b>2008</b>	<b>7,920</b>	<b>7,524</b>	<b>371</b>	<b>25</b>
<b>2009</b>	<b>9,279</b>	<b>8,723</b>	<b>507</b>	<b>50</b>
<b>2010</b>	<b>10,521</b>	<b>9,785</b>	<b>637</b>	<b>100</b>
<b>2011</b>	<b>11,533</b>	<b>10,611</b>	<b>773</b>	<b>150</b>
<b>2012</b>	<b>12,453</b>	<b>11,208</b>	<b>1,045</b>	<b>200</b>
<b>2013</b>	<b>13,258</b>	<b>11,667</b>	<b>1,341</b>	<b>250</b>
<b>2014</b>	<b>13,948</b>	<b>11,996</b>	<b>1,453</b>	<b>500</b>
<b>2015</b>	<b>14,638</b>	<b>12,296</b>	<b>1,342</b>	<b>1,000</b>

## Why is ethanol desirable?

- ❖ Ethanol is renewable and has a significant positive net energy balance.
- ❖ Ethanol provides important environmental benefits.
- ❖ Increased demand for grain improves farm revenues and reduces the cost of government programs.
- ❖ Ethanol reduce America's dependence on imported oil, expands the economy, creates jobs, and puts money into the pockets of American consumers.

**Thank you,**
